Brine-mixing Machine

Lak-O-Mat LM-800 / LM-1600

Modelle

LM-800

LM-1600

Beschrieb

The brine-mixing machine consists of a stainless steel tank, a stainless circulation pump, a hopper for the dry material (salt / additives) and various fittings and pipes. The machine mixes within 2 - 3 minutes up to 1500 liters of water with appropriate amounts of dry material without leaving a residue.

Fill the desired amount of liquid (dose by means of dipstick in liters) into the mixing vessel and the liquid is brought into circulation by the centrifugal pump. The powder is poured in the hopper to be solved. The filling valve regulates the dumping speed. The circulating liquid absorbs the powder and brings it into the solution / dispersion. By opening the drain valve the final product may be pumped to the site.

		LM-800	LM-1600 (ohne Abbildung)
Volume	Lt/litres	800	1600
Volume Hopper	Lt/litres	40	40
Voltage	V/Hz	380/50	380/50
Net Weight	kg	180	320
