

EZ Tag-Feeder

Labelling System

innovative · reliable · leading

poly-clip[®]
SYSTEM

- Tamper-proof labeling showing product information and origins, with batch traceability assured through individualized and up-to-date information
- Fulfills all of the demands of the European Food Information (LMIV)
- Retrofitting possible any times
- Designed for clipping machines of the Easy Clip Line® EZ 4500/600/700 and EZ P 600/700

Applications

With the EZ Tag-Feeder labelling system, a label with up-to-date information can be embossed during production. It becomes tamper-proof in the process of being attached directly to the product while the clip closes the bag. This means that exact identification and complete traceability is possible in every case.

Advantages

- Product labelling during clipping
- Tamper-proof labelling
- Easy changing of the embossing stamp
- Up-to-date information for exact batch traceability
- For all product specific data, up to three lines, each with eight to twelve characters (letters and numbers) can be embossed

Labels

- Blank or coloured
- Abrasion resistant, resistant to boiling water
- Pre-printed with, for example, customer logo, veterinary approval number, or as a decorative label with individual print

Optional equipment

- Clipping machine as right or left handed versions
- Labels in different sizes: 1=S, 2=M, 3=L, 4=XL

Separator area with clipped label

Easy exchange of the embossed stamp

Pre-assembled embossing plate

Embossed labels of size 1=S

- Embossed stamp set: letters, date, date/day or day number

Function and operation

The labelling system EZ Tag-Feeder works pneumatically. It is mounted directly to the clipping machine. The labels are transported to the embossing station, embossed and passed on to the separator area of the clipper. The label is clipped in during clipping.

Technical data

Width:	130 mm
Depth:	455 mm
Height:	770 mm
Weight:	5.5 kg
Compressed air:	5-7 bar/0.5-0.7 MPa
Air consumption:	0.9 NL/cycle
